

## Event Power Requirements

It is critical that we get an accurate assessment of power needs from each exhibitor ahead of time so that we can plan our power grid accordingly.

Power is delivered to booths via cables and outlet boxes... each outlet box contains two duplex outlets (like the outlets in the walls of your home or office) and will accommodate a maximum of 20 amps.

### IMPORTANT:

**CIRCUIT BREAKERS:** Power consumption is controlled by circuit breakers. If the desired amperage you provide is incorrect, circuit breakers will trip, affecting your booth and sometimes, also your neighboring booths. To remedy the tripped breaker, you will have to unplug equipment to get your total power load under what is supplied or you will have to order additional power on site. Depending on your booth location, additional power may not be possible. IF power can be added, the charge for an on-site change will be TWICE the normal rate for the power added, because of the additional labor to distribute power around booths already set up. Planning ahead can avoid annoying and non-productive downtime in addition to costly change orders.

**POWER STRIPS:** Plugging power strips into the duplex box does not mean you have more power... only the capability to plug in more devices to the same originally allocated power. If you need more sockets than what can be accommodated by the duplex box with the appropriate number of power strips, YOU MUST ORDER MORE POWER.

**GFCI PROTECTION:** All 120 Volt outlets are GFCI (Ground Fault Circuit Interrupter) protected, as required by code. If your equipment trips the GFCI, it means there is a fault in your equipment. We CANNOT disable the built-in protection, nor can we fix your equipment. We strongly suggest that you test your equipment on a GFCI outlet ahead of time.

**EXTENSION CORDS:** Power will be delivered to the outlet box(es) in your booth. Distribution within the booth is your responsibility, as well as making sure your equipment is in good working order. Please bring the appropriate extension cords and any materials to tape or mat down your

DO NOT PILE PACKING OR OTHER MATERIALS ON TOP OF POWER BOXES... THIS CAN CAUSE OVERHEATING, AND EXTREME DANGER OF FIRE!!

## Barrett-Jackson Event - Power Order Form

Please complete & email to your Activation Account Manager

### Calculating Power Required:

|  |   |  |                                       |
|--|---|--|---------------------------------------|
| Total wattage of all lights in your display<br>_____ | Divide by 100<br>= <b>amps</b><br>_____ | + total additional amps for other electrical components (U.L tag)<br>_____ | = <b>Total amps required</b><br>_____ |
|--|---|--|---------------------------------------|

| Power Required   | Cost  | Order Total                         |
